

Accessible devices for people with a motor impairment

Tested devices

- The selected devices have been tested by an independent panel of people with a disability, coordinated by the non-profit association Passe-Muraille.
- This evaluation is based on predefined accessibility criteria taking into account the specific needs of the majority of people belonging to the same disability category.
- **We therefore do not guarantee that these devices can be optimally used by all people recognized as belonging to the disability category concerned.**
- This catalog will be updated regularly.

Advantages of the devices

We recommend these phones to people with a motor impairment because of their shape. They do not require any pinching, twisting or rotating of the wrist to operate. They offer the possibility of "hands-free" use, programmable keys and voice recognition.

It is important to note that all the devices running Android 4.0.4 Ice Cream Sandwich have:

- an accessibility menu as standard
- an advanced voice synthesis and voice command system for calling, texting, etc. Voice synthesis is available in French and English as standard. For Dutch, the appropriate module must be downloaded: [SVOX LENA DUTCH](#).
- a practical screen reader that can be used directly for calling, texting, etc., but not for reading web pages or with certain incompatible applications
- a blockable drop-down menu: this enables better scrolling control

It should be noted that the most recent, and the most complete, versions of the Android OS integrate the configuration of the accessibility menu when the device is switched on for the first time.

	Samsung Galaxy Z Fold 2 5G 	<ul style="list-style-type: none">• One-handed mode• Narrow front screen• Gesture control must be activated. Examples: double-tap to turn on the screen, swipe to take a screenshot, ...• Voice assistant + settings: verbosity, shake for continuous reading/speak passwords• Unstable on horizontal or vertical support. It is recommended to use an appropriate cover.• Screen sensitivity settings• Bixby• Choice of touch and hold delay• Simple menu

Accessible mobile phones

We recommend these phones to people with a motor impairment because of their shape. They do not require any pinching, twisting or rotating of the wrist to operate. They offer the possibility of "hands-free" use, programmable keys and voice recognition.
