

## Voice Managed Service (VMS)

### Contract summary

This contract summary provides the main elements of this service offer as required by the EU law (<sup>1</sup>). It helps to make comparison between service offers. Complete information about the service is provided in other documents.

### Services and equipment

#### Fixed Voice Telephony:

Voice Managed Services (VMS) is a network-level product that allows incoming calls to geographic numbers to be intelligently managed by simply rerouting them to another routing destination in the event of a problem at one or more locations.

The customer can choose only one option for the same numbers: VMS Classic, VMS DRS or Voice Continuity.

- **VMS Classic:** Offers intelligent management of incoming calls, such as interactive voice response programming, queue management, busy line management, no reply management and other malfunctions. The customer manages the routing of incoming traffic via MyProximus.
- **VMS DRS:** offers intelligent management of incoming calls, such as interactive voice response programming, queue management, busy line management, no reply management and other malfunctions. Proximus activates traffic routing on customer demand.
- **Voice Continuity:** Offers easy incoming call forwarding management, the customer manages the routing himself via a mobile App or via MyProximus.

Compatible options (not included):

- ACM (Agent Contact Management): routing of inbound calls to specific employees based on their skills and competencies
- Call campaign: Automatically generates outbound calls to connect customers with employees
- Voice recording of phone calls
- Statistics of all incoming calls (online and from previous calls)
- Additional voice messages
