

Belgacom Forum™ 500 and Forum™ 5000

Forum iPhone PC

User Guide

Welcome to Belgacom

Thank you for choosing a Belgacom product that stands for the best in quality matched with high design standards.

Forum iPhone PC

The following operating instructions will assist you in using your Forum iPhone PC and answer most of the questions that may arise. If you need any extra information or support, the first people to ask are your system administrator or retailer.

Internet:

www.belgacom.be/pabx

You can contact our Support on the following telephone numbers:

in Dutch: 0800 22 400

in French: 0800 33 400

in German: 0800 44 400

in English: 0800 55 400

Forum™ 5000 and Forum™ 500

This user guide applies to the Forum™ 5000 and Forum™ 500 product families. The Forum™ 500 product family comprises the Forum™ 523, Forum™ 525 and Forum™ 550 communications systems. The Forum™ 5050 communications system belongs to the Forum™ 5000 product family.

If a reference is made in the text to the Forum™ 500, the description applies to all systems; if the individual characteristics are different, a special note is given.

We hope you enjoy using Forum iPhone PC.

Forum® telephone exchange 27**

General Information

The Forum iPhone PC is a system terminal that can be operated using the Forum 500.

This system terminal is a PC-software based communications solution. No specific hardware, other than the communications system, is required to operate the Forum iPhone PC. The Forum iPhone PC's technology is based on VoIP (Voice over Internet Protocol).

The Forum iPhone PC is available in two different versions: one with an active telephone user interface and one without a user interface. The Forum iPhone PC without the user interface can be integrated into Microsoft Outlook (for outgoing calls).

For the Forum 500 communications system, PC versions of the Forum Phone 525 and Forum Phone 535 are available, but not for the Forum Phone 515.

In this user guide, those features of the Forum iPhone PC which set it apart from the hardware-based system telephones will be described.

Note: *For more operation information, please refer to the "the Forum Phone 515, Forum Phone 525, Forum Phone 535" user guide.*

Product-related licence keys are required for the operation of different communications systems.

Abbreviations and Terminology

AEC (Acoustic Echo Cancellation):

Filters out frequencies emitted by the speaker that would be picked up by the microphone, preventing the caller at the other end from hearing their own echo.

Codecs:

Compression (and decompression) of audio data, in real time, before transportation via the Internet Protocol, thus reducing network load.

DirectSound:

Application programming interface developed by Microsoft for controlling the sound card. Makes it possible to simultaneously output the audio data of multiple applications.

Dynamic Jitter Buffer Adjustment:

Smooths out delays caused by varying network utilisation, that can occur during transportation of real-time audio data via the Internet Protocol.

RAS (Remote Access Server):

Makes the creation of a network connection via a modem, ISDN or DSL possible.

RTP / RTCP (Real Time Protocol / Real Time Control Protocol):

Protocols for transporting real-time audio data via the Internet Protocol.

Skin:

Interchangeable graphical user interface.

TAPI (Telephony Application Programming Interface):

A programming interface developed by Microsoft and Intel for telephony applications that use Microsoft Windows.

TSP (TAPI Service Provider):

Hardware-dependent driver module providing TAPI functionality for specific devices (e.g. for the Forum 500).

VAD (Voice Activity Detection):

Recognizes speech pauses that are then not sent so as to reduce network load.

System Requirements

Minimum

- CPU: PIII 1 GHz or comparable processor
- RAM: 64 MB
- Hard drive capacity: 20 MB
- VGA: 800 * 600, 8 bit
- Sound: full-duplex-capable sound card
- Microphone / Speaker
- Network or RAS connection
- Operating System: Microsoft Windows 98 / ME / 2000 / XP

Recommended

- CPU: PIII 1 GHz or comparable processor
- RAM: 128 MB
- Hard drive capacity: 50 MB
- VGA: 800 * 600, 16 bit
- Sound: full-duplex-capable sound card
- Headset
- 10 Mbit/s Network connection
- Microsoft Windows XP

Characteristics

- Photo-realistic user interface with Skin technology
- Fully-fledged system terminal with all features comparable with Forum iPhone 535
- Automatic software update (from communications system)
- Answering machine with e-mail notification
- Recording of calls
- Sending of audio e-mails
- Tone generator for call melodies, DTMF and notification tones similar to the hardware-based system telephones
- Can be completely operated via a PC keyboard
- Alphanumeric dialling via PC keyboard
- Suitable for workstations for the visually-impaired
- Dialling of call numbers/names using "Drag & Drop"
- Automatic RAS dial-in can be configured
- Local voice echo (depending on the sound card)
- Configuration assistant (including sound card configuration)
- Control via the CTI applications of other providers is possible
- Voice codecs G.711, G.729A each with VAD (Voice Activity Detection) and dynamic jitter buffer adjustment
- RTP/RTCP
- Echo suppression, AEC (Acoustic Echo Cancellation)

Installation

Please note that to install the Forum iPhone PC you must have administrator rights for your PC.

1. Run the "IPhoneSetup.exe" file.
2. Select the language in which the installation is to be made and click on **OK**.

3. Click on **Next**.

4. Now select the directory on your hard drive into which you would like to install the Forum iPhone PC and confirm by clicking on **Next**.

5. Select the desired version:

Forum iPhone PC with Interface:

Forum iPhone PC with an interface for mouse and/or keyboard operation. This alternative is skin-capable and can also be used with a CTI application.

Forum iPhone PC without Interface:

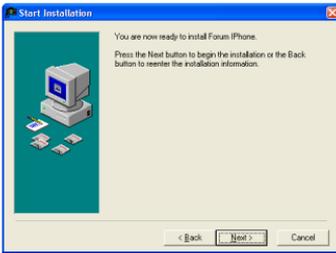

Forum iPhone PC without an interface can only be used with a CTI application and cannot be used without a CTI application.

Activate one of the plugins listed if a correspondig component is installed on your PC, then click on **Next**.

6. Select the directory in the Start menu in which the Forum iPhone PC is to be installed, then click on **Next**.

7. Click on **Next** to start the installation.

8. Once the installation is successfully completed, click on **Finish**.

Functionality

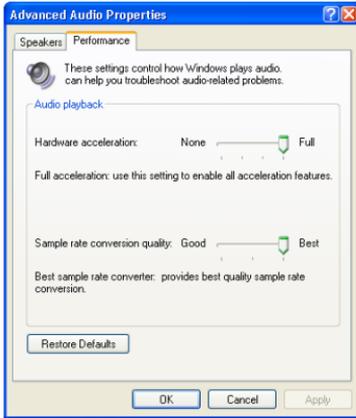

Installing the Forum iPhone PC also automatically installs a current version of DirectX, if it is not already on your PC.

In a standard DirectX installation, DirectSound is configured with default settings that minimize processor load, but which may also reduce audio quality. You can improve the quality by taking the following steps.

Note: *You must have administrator rights to be able to adjust the DirectSound audio quality!*

1. Go to the **Control Panel** (in Windows XP), then to **Sounds and Multimedia** and select the **Audio** tab.
2. In the **Sound playback** section, click on **Advanced**, then select the **Performance** tab. Change the **Hardware acceleration** to **Full** and the **Sample rate conversion quality** to **Best**. Confirm the settings with **OK**.

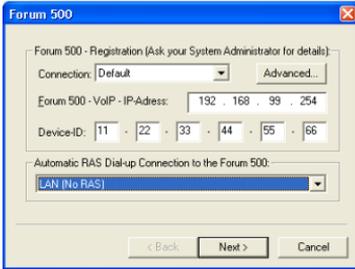

3. In the **Sound recording** section, click on **Advanced**. (if available). Change the **Hardware acceleration** to **Full** and the **Sample rate conversion quality** to **Best**. Confirm the changes with **OK**.
4. Close the **Audio** tab with **OK**.

Configuring the Forum iPhone PC

When starting the Forum iPhone PC for the first time, the configuration assistant used to configure the Forum iPhone PC opens automatically. These options can subsequently be accessed via the **Options** menu entry (see also *Taskbar Symbol and Application Menu* starting on page 26).

Forum Tab

The data required here (the communication system's IP address and device ID) can be obtained from your system administrator. The **Connection** setting should only be changed if you want to connect to the communications system via an RAS dial-up connection (if working at home or for a telecommuting workstation).

Display Tab

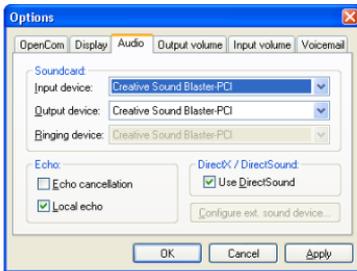

This tab is not available for the version of the Forum iPhone PC which does not have an interface. Select the desired interface from the **Skin selection** and the **Device type**.

Activate the **Truecolor version** for optimal display quality. This option is only available if the graphic card allows for a colour depth of 16 bit (65536 colours) or more.

You can also stipulate that the Forum iPhone PC is automatically shown in the foreground of your PC screen when you have an incoming call. To establish this setting, activate the **Popup an incoming call** option. In Windows 2000 and Windows XP, a Tool-tip is also displayed in the task bar.

Audio Tab

Select the sound card for the audio input and output. The selection is necessary if multiple sound cards or sound-card drivers are installed. The settings for input and output must refer to the same device. When using DirectSound too, the same device must be selected for input and for output in the system's sound and multi-media settings.

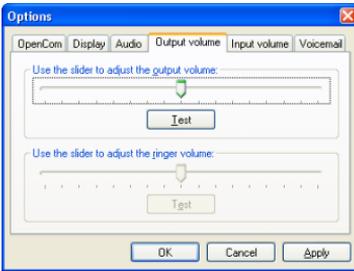

You can also specify which connected device emits the ringing tones, e.g. a connected headset or a speaker connected to the sound card.

The **Echo cancellation** option reduces audible echo for callers. An echo will be heard if a speaker and a microphone or a badly suppressed headset is used. If this option is activated, the microphone is suppressed, or for hands-free calls it is muted during calls via the receiver as soon as the caller speaks.

The **Local echo** option is only available if your sound card supports the direct output of microphone data to the speaker. This means that speech is played back without delay in suppressed form on your speaker, in the same way that it is on your telephone. This option is only recommended if you are using a headset.

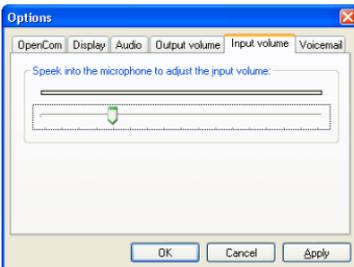

The **Use DirectSound** option allows multiple applications to output acoustic signals simultaneously. This means that you can use the Forum iPhone PC while playing music data, for example. Deactivate this option if you experience problems with the input and output of audio data.

Output volume Tab

Click on **Test** and the ring tone will be played. Move the slide control to a position where the ring tone is played back at an adequate and audible volume.

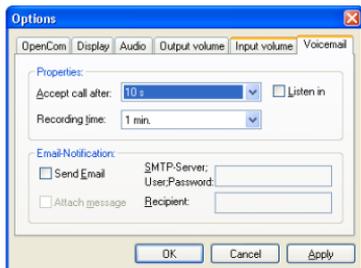

Input volume Tab

Speak into the microphone at normal volume, keeping a normal distance from the microphone. Wait until the slide control has come to rest.

Voicemail Tab

This tab is not available for the version of the Forum iPhone PC that does not have an interface. You can configure the internal answering machine here.

- Select the time after which the call is to be answered by the internal answering machine. If you set the time to "0" you configure immediate answering of calls, without any delay.
- Select the maximum call duration. By setting the time to "0", you configure the answering machine to operate without message recording (announcement only).
- Activate the **Listen in** option to play back a message via the speaker while the message is being recorded. This allows you to decide whether you wish to accept the call.
- Activate the **Send Email** option to send an e-mail notification for each call. Enter the data for a SMTP server. If a user login is required for the SMTP server, then you can enter the user name and password, separated by a semicolon respectively, in the same entry field. Enter the e-mail address of the recipient of the notification in the recipient field. Activate the **Attach message** option to send the recorded message as part of the e-mail.

An e-mail notification contains the following data: Date and time of the call, call number or name of the caller (if known), and the recorded-message as an attachment (if this function is activated).

Using the Forum iPhone PC with an Interface

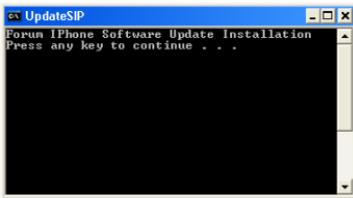

If you have installed the Forum iPhone PC **with** a user interface, a telephone user interface is displayed when the program is started.

If you have selected the "Default Skin" user interface, the interface will be similar to the user interface of the Forum Phone 525 or Forum Phone 535. For the Forum iPhone 525 and the Forum iPhone 535 different variants with key extension are available.

The following keys are also available:

- Key to minimise, restore or close the Forum iPhone PC
- Key to operate the Forum iPhone PC's recording function
- Key to call up the options menu

Program Start

After the Forum iPhone PC is started, the display will show the status of the log-in to the communications system. During log-in, the Forum iPhone PC software version's compatibility with the communications system is checked. Maybe, the Forum iPhone PC software will be updated. In this case, confirm with **Yes**.

Operation

The Forum iPhone PC can be used with a mouse or keyboard of any workstation computer, in a manner similar to a Forum Phone 525 or Forum Phone 535.

When making entries via the keyboard, please note the terminal's input mode, which distinguishes between numeric and alphanumeric input. If, for example, you enter a call number you are in numeric input mode. When you search for a name in the telephone book, you will be in alphanumeric input mode. To enter a "C" on the terminal, for example, you have to press the "2" key three times. When the letter "C" is entered on the keyboard, the Forum iPhone PC automatically converts it to the corresponding digit key. Always use your workstation computer's number pad to enter digits in numeric input mode.

Press the shift key on the workstation computer together with a second key to enter a long key-press on the Forum iPhone PC. For example, the Forum iPhone PC's ABC key has the telephone book ("short") and language selection ("long") functions. You can open the telephone book by using the Ctrl+A key combination. With the key combination Shift+Ctrl+A you reach the language selection.

The following table describes the assignment of the workstation computer's keyboard to the Forum iPhone PC keys:

Ctrl	Shift	PC Key(s)	(Alpha) numeric	Phone Key(s)	Comment
		0-9	Numeric		Digit input
		*	Numeric		Digit input
		/	Numeric		Digit input
✓	✓	0-9	Alpha-numeric		Digit input

✓		E			Recording: Start/Pause
✓		S			Recording: Stop
✓		P			Recording: Playback/Pause

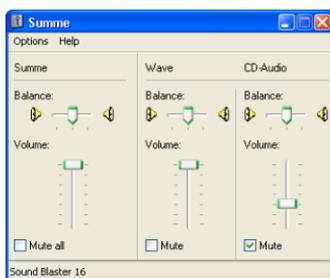

Drag & Drop

You can also use call numbers derived from other applications to make calls. If the application supports Drag & Drop, mark the call number with the mouse. Click on the marked call number with the left mouse key and pull it, while holding the mouse key down, onto Forum iPhone PC. The transferred call number will now be dialled.

Note: *The call will only be made once the receiver is picked up or the hands-free key pressed.*

Drag & Drop can also be used to search for names entered into the Forum iPhone PC's telephone book. The closest matching entry will be marked.

Volume Settings

During the call state, while playing back a recording, or performing any other actions that use the sound card, the Forum iPhone PC temporarily modifies the workplace computer's volume settings. This volume setting is preset in the **Options** dialogue. On completion of the action, the previous volume setting is restored.

Note: *If the volume or microphone sensitivity of the sound card are changed during a call, this configuration is saved for the Forum iPhone PC and used for future calls.*

Audio Functionality

In addition to its telephone functionality, the Forum iPhone PC enables the recording of calls and audio e-mails. The Forum iPhone PC can also be used as an answering machine.

These functions are operated via the three extra keys "Record", "Stop" and "Play".

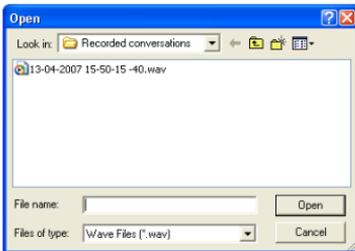

The "Record" and "Play" keys can, depending on their operational state, change to become pause keys.

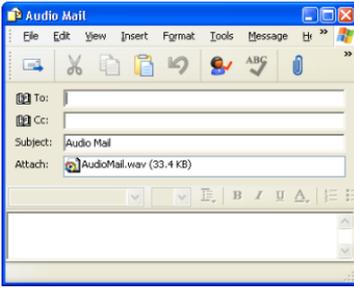

The functioning of the keys depends on whether the answering machine has been activated or not. Answering machine messages and recordings can also be played back using Drag & Drop with an audio file.

Audio functionality with a deactivated Answering Machine

The three "Record", "Stop" and "Play" keys are used to record calls and play back recordings. Audio e-mails can also be sent. The functionality of the keys depends on whether or not the Forum iPhone PC is idle.

When the Forum iPhone PC is in its idle state, click on the "Play" key to play back a previously recorded recording. Select an audio file from the **Open** dialogue. You can also "Stop" and "Pause" during playback.

You can use the "Record" key in its idle state together with the microphone to record an audio e-mail. You can also "Stop" and "Pause" during recording. At the end of the recording, an e-mail program opens with a predefined e-mail containing the recorded file as an attachment.

While a call is in progress using the Forum iPhone PC, you can click on "Play" to select a previously recorded recording and play it back so that the caller can also hear it. You can also "Stop" and "Pause" during playback.

In a call state, the current call can be recorded using the "Record" key. You can also "Stop" and "Pause" during recording. A notification tone alerts the caller to the start of the recording.

Please note: *At the end of the call, these functions are stopped.*

Note: *The recordings are stored in the directory*

My Documents/Recordings *or in the* **Recordings** *subdirectory of the Forum iPhone PC's installation directory. The file names contain the date, time and call number or name of the caller.*

Audio functionality with an activated Answering Machine

When the answering machine is activated a welcome text can be recorded using the microphone and the "Record" key. You can also "Stop" and "Pause" during recording. Once completed, the welcome text is played back once via the speaker so that you can check that it is correct.

If a call is being made or a call initially diverted to the answering machine is then accepted, the recording mode is temporarily acti-

vated. In this case, the recording can be controlled using the three keys "Record", "Stop" and "Play".

New messages on the answering machine are indicated by a symbol appearing in the taskbar (see *Taskbar Symbol and Application Menu* starting on page 26). The symbol in the taskbar shows the new messages until one of them is selected for playback.

The selection dialogue for messages received is opened by pressing the "Play" key. The selected message will then be played back via the speaker. You can also "Stop" and "Pause" during playback.

Note: *The recordings are stored in the directory **My Documents/Answering Machine Recordings** or in the **Answering Machine Recordings** subdirectory of the Forum iPhone PC's installation directory. The file names contain the date, time and caller's number or name.*

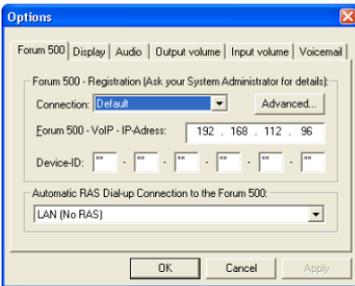

Taskbar Symbol and Application Menu

When the Forum iPhone PC is started, a new symbol appears in the taskbar's information area. This symbol shows the terminal's current state. When you move the mouse over the symbol, the state is shown as text.

Double click on the symbol with the left mouse key to minimise or restore the Forum iPhone PC (for the Forum iPhone PC variant **with** interface only). You can open the application menu by clicking with the right mouse key.

The following functions are available via the application menu:

- Opening the **Options** dialogue
- Activating and deactivating the answering machine (for the Forum iPhone PC variant **with** interface only)
- Identifying the software version
- Ending the Forum iPhone PC

User instructions

All the user instructions for our Forum® telephone exchanges are available on the included CD ROM, and on our Internet site at: www.belgacom.be/pabx.

Diagnosing the problem

In the event of a technical failure or problem, we request that you systematically carry out the following tests before contacting our technical support service.

To facilitate the diagnosis, please inform the helpdesk operator⁽¹⁾ of these test results.

Our helpdesk can solve certain problems remotely. This will avoid a technician's visit and reduce repair time considerably.

Problem with a telephone connected to your exchange

1. Reset the telephone by unplugging it and plugging it back in again.
2. Check the connections, cables and the various plugs. Try it out with the cables from another telephone that is working properly.
3. Test the defective telephone in another socket into which a functioning telephone is plugged.

Problem with a cordless DECT telephone

1. Remove and then reinsert the batteries.
2. Ensure that the charger is properly connected.
3. Test the DECT telephone near each of the antennas.

General external or internal communication problem

1. Check that the installation is always powered by 230V.
2. Reset the PABX:
Switch off the 230V power supply for a few seconds.
Disconnect the Forum's UPS backup power supply, too.
Plug it back in and wait a few minutes for the system to start up again
NB: You will not be able to use the system during this period
(for up to 30 minutes).

If the problem persists, contact our technical support service.

(1) Contact our technical support service

If the problem persists after these few tests:
Consult our Internet site www.belgacom.be or contact our technical support 24/24 at the following numbers:

- for SMEs and residential customers: 0800/55700
- for large companies 0800/55100

Change your configuration

To change your installation, add equipment or adapt the programming on your Forum®, contact our Customer Service Department at the following numbers:

- for SMEs and residential customers: 0800/55800
- for large companies 0800/55200

For more information:

- Please dial 0800 55 400
- Visit us in the Internet at www.belgacom.be/pabx
