Customer Case Study

About BMID

A privately owned company creating the Belgian reference for mobile identity and digital privacy.

With their ITSME solution, Belgian Mobile ID provides a frictionless experience for anyone with a mobile phone and a Belgian eID to digitally log in, register, confirm transactions and even sign documents.

What

Proximus assisted BMID to successfully migrate their open source datacenter workloads to the Azure Cloud. This migration included:

- The rehosting of Linux servers to Azure Virtual Machines
- Replatforming MySQL databases from an IaaS to a PaaS model
- Using templated deployment and Infrastructure-as-a-code allowed for a smooth first time right migration towards the Cloud.

Benefits

The adoption of the Azure MySQL service provides predictable performance, built-in high availability and allows to scale as needed within seconds. The effort to keep the solutions running significantly decreased, allowing BMID to focus on growing their platform.
