

Accessible Devices for people with a hearing impairment

Tested devices

- The selected devices have been tested by an independent panel of people with a disability, coordinated by the non-profit association Passe-Muraille.
- This evaluation is based on predefined accessibility criteria taking into account the specific needs of the majority of people belonging to the same disability category.
- **We therefore do not guarantee that these devices can be optimally used by all people recognized as belonging to the disability category concerned.**
- This catalog will be updated regularly.

Advantages of the devices

We recommend these devices for their various visual and tactile alerts that notify the user of incoming messages/calls, and also because of their programmable keys, ease of writing and receiving text messages/e-mails, and the possibility to make video calls.

It is important to note that all the devices running on Android 4.0.4 Ice Cream Sandwich have an accessibility menu as standard

It should be noted that the most recent, and most complete, versions of Android OS integrate:

- configuration of the accessibility menu on initial set-up of the device
- recognition of the caller through vibration
- a vibration creation module for the vibrate function
