**GDPR**

# We prepare you for the new personal data regulation

The integrity of your company is crucial. The **new European privacy regulation (GDPR)** imposes even stricter protection of personal data **as of 25 May 2018**.

So it's time to take a good look at your personal data protection. **We can help identify your vulnerabilities and provide you with security solutions for optimal protection.** So you'll be ready for tomorrow.

# GDPR: the new European privacy regulation (GDPR)

## New times, new laws

With digital transformation in full swing, the pirates are lying in wait. These are criminals who target your company and customer data to make money or harm your company.

It is therefore vital to pay attention to security. The GDPR addresses this in detail. Security should now form part of your business and ICT strategy, and must be thoroughly implemented and monitored.

## What does the new GDPR regulation expect of you?

1

If your company processes personal data, then you must protect your digital data and possibly appoint a data protection officer.

2

Data handlers can be held directly responsible for the security of personal data. You therefore need to raise awareness among our employees since they too are responsible for the protection of personal data.

3

You are required to conduct the necessary data protection impact assessments for projects with high privacy risks.

4

Data leaks must be reported within 72 hours to the supervisory authority and the persons concerned.

5

There must be a correct response to each leak. You must also be able to demonstrate that you provide adequate security for customer data.

6

Transparency regarding personal data storage is also required. You must give customers and employees the necessary visibility and control over the data that you store about them.

## How can we help you?

- **GDPR preparation services**

We evaluate your current level of compliance with the new regulation and give you advice on potential changes.

- **GDPR action plan**

We propose an action plan on both a technological and organizational level.

- **Security solutions for endpoints and servers**

We protect your PCs, laptops, and servers to prevent files with sensitive data from being stolen.

- **Data security**

We use e-mail and web proxy to render cyber attacks with files and hyperlinks harmless.

- **Network security**

We monitor your incoming and outgoing network traffic with next-generation firewalls and IPS.

- **Managed security services**

We manage and configure your security settings based on the best security practices and the most recent threat information. You receive all the information you need to respond adequately to a data leak.

- **Back-up/disaster recovery**

With Proximus Disaster Recovery-as-a-Service (DraaS) you copy all your business-critical information to the cloud. That way, your personal data is always available.

- **Experienced cyber security incident response team**

In case of data breaches, we guide you from A to Z to ensure a correct response and manage the forensic analysis. We manage your security services remotely and in full compliance with the new regulation.

- **Data protection officer**

We offer you the services of a data protection officer from Proximus so you don't have to look for one yourself or hire someone on a permanent basis. Depending on your needs, the data protection officer will work for you a number of hours per day or per week.

## Ready for the new GDPR regulation?

**How safe is your personal data? Is your company strong enough for the new regulation?**

With the Proximus **GDPR preparation services**, you know exactly how vulnerable your company is and what to do about it.

Check the security of your personal data today and discover any potential vulnerabilities. Together we can remedy them.

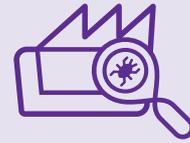

7x

Today, the number of cyber incidents is more than 7 times higher than in 2015.

1,119

The number of security incidents the Belgian Federal Cyber Emergency Team received in 2015.

90%

Of all organizations are affected by security problems, whether they are large or small companies.
